Austin, TX | 469-743-1796 | mhatrepanav@gmail.com | github.com/panavmhatre

EDUCATION

The University of Texas at Austin, Austin, TX

May 2028

Bachelor of Science, Computer Science; Bachelor of Science, Statistics and Data Science

Organizations: ColorStack, UT ACM (Operational Officer), Management Leadership for Tomorrow, CodePath, UT Genesis

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Systems, Operating Systems, Principles of Computer Architecture

SKILLS

Languages: Java, Python, C, C++, SQL, TypeScript, JavaScript, Swift, Kotlin, R

Frameworks/Databases: Spring Boot, React, Node.js, Express.js, Next.js, PyTorch, MongoDB, MySQL

Tools: Git, Linux/Unix, AWS, Azure, Docker, Kubernetes, Jenkins, GitHub Actions, Claude Code, Cursor

EXPERIENCE

Fidelity Investments, Westlake, TX - *Software Engineer Intern*

June 2026 - August 2026

- Built and deployed a Java Spring Boot backend service and REST API to process **2,000+** daily trades from Oracle and surface unconfirmed trades in real time.
- Reduced unconfirmed trade reconciliation time by **65%** by automating trade filtering, broker email notifications, and manual handoff steps through JavaMail API.
- Launched the pipeline for Fidelity's European Trade Operations team and presented the solution to the Chief Operations Officer as a scalable replacement for manual trade reconciliation.
- Tested trade filtering, broker email triggers, and exception paths with JUnit and SonarQube; deployed the application through Jenkins and IBM UrbanCode.

Stanford University, S3L Lab - Stanford, CA - *Undergraduate Research Assistant*

July 2024 - May 2026

- Integrated Department of Energy API data covering regions serving 10M residents using Pandas and NumPy
- Built a hybrid LSTM-XGBoost time-series forecasting framework using PyTorch and scikit-learn, reducing forecasting error by **~18% versus** a baseline RNN.
- Developed real-time dashboards using Plotly for grid monitoring, enabling quick detection of grid blackouts
- Automated ML workflows using AWS EC2, reducing manual setup and accelerating iteration across experiments

PROJECTS

LearnX *Express.js, JavaScript, React, Next.js, Git, Vercel*

May 2025

- Spearheaded end-to-end development of an interactive course platform with Node.js, Express.js, and Next.js, achieving an average user session duration of **12 minutes**
- Designed RESTful APIs and optimized MongoDB queries, improving data load speed and enabling seamless course progress tracking for **100+ users**
- Integrated automated CI/CD pipelines (Vercel, GitHub Actions), reducing deployment times from hours to a couple of minutes per release
- Collaborated with **5+ content creators** to tailor features based on user feedback, resulting in a 4/5 average rating

Interval *Swift, SwiftUI, OpenAI API, MySQL, Git, HealthKit*

June 2025

- Engineered an AI-powered iOS application in Swift and SwiftUI for 300+ student users integrating the OpenAI API using REST requests and JSON parsing to process health data and generate personalized insights
- Built MySQL data pipelines to unify records from Apple Health, OCR-scanned documents, and medical providers, powering persistent profiles and personalized AI insights across sessions
- Shipped health-tracking workflows that achieved 78% user retention and increased daily active usage by ~40%
- Won MLH Hook 'Em Hacks and presented Interval to partners from Pear VC, Entrepreneur First, and a16z

LEADERSHIP

Beacon of Hope Charity, Plano, TX - *Founder*

March 2024 - August 2026

- Organized a door-to-door fundraising campaign, leveraging public speaking, communication, and pitching skills to raise over **\$15,000** for pediatric cancer research across **300+ neighborhoods**
- Directed a team of **50+ volunteers**, overseeing event planning, fundraising campaigns, and outreach initiatives

HONORS AND AWARDS

- LinkedIn Scholarship (2025), MLH HookemHacks 1st Place (2026), Apple Swift Student Challenge Winner (2025)
